Gladiolus Bulblets

One of the best ways to get started with the high priced, new varieties is to buy Bulblets. These properly cared for sometimes give a small bloom the first year. They should also make bulbs that would give large blooms the next year.

By peeling the bulblet and planting it in a small pot or dirt band in March or April and get it well started by the time the garden is ready to plant, then turn out of pot or remove the dirt band without disturbing the roots and planting in the ground, they give splendid results.

SPECIAL—MIXED COLLECTION

200 Bulblets, 25c; 1000 Bulblets, \$1.00

These bulblets are assorted and are from varieties that the large bulbs sell from 5c to 25c each. They are all colors and shades of color. A few of the larger ones will bloom the first year, but most of them not until the second. They will give you a wonderful lot of beautiful flowers. This is the best way we know of to get a fine assortment of bulbs for a small amount of money and a little pleasant, healthful labor.

NAMED VARIETIES OF BULBLETS NOT BULBS

NOT MIXED—These prices are for each variety separate.

You cannot buy less quantities of any of the named varieties of bulblets and have them labeled separate than specified in the price list.

Directions for Growing Bulblets

Make a trench three or four inches wide and two inches deep (if soil is light and sandy, three inches). Sow the bulblets in the bottom as you would peas. They can be quite close together, a half inch apart each way. Now put in one inch of dirt and pack down thoroughly with hoe or with your feet. Then fill up the trench with the rest of the dirt, but leave it loose. They must be kept quite damp and not allowed to dry out. You can lay old gunny sacks over the rows, and when green shoots begin to come through take them off. Keep ground well stirred and all weeds down, and you should have a nice lot of bulbs in the fall. If the bulblets are soaked in water for three or four days it makes them come better and quicker.

GLADIOLUS SEED

We have a nice lot of seed selected from the larger and most expensive varieties, put up in three sized packages. 25c, 50c and \$1.00.

BABY BULBS

These are the small bulbs first year's growth from bulblets and are about ½ inch in size.

With good care many will bloom this year and make large sized bulbs for the next year.

LIATRIS

Pycnostachya—The popular name of this plant is Kansas Gay Feather. Nothing can be planted that will attract more attention on account of its unusual appearance, but it is beautiful as well as odd. It blooms in midsummer and throws up long narrow spikes of rich purple flowers, which last a long time. A peculiarity of this plant is its attraction for butterflies. Strong plants 25c; \$2.50 per doz.

MONTBRETIA

Sun-loving bulbs in shades of yellow, orange and red, flowers from August to October. Their fine foliage and free-flowering arching sprays make them invaluable in the summer border or for cutting, and the best varieties make fine pot plants. In the table decorations that took 1st at the Wis. State Fair, Montbretia were used quite extensively, and were admired by every one.

Red or yellow separate or mixed \$1.00 per doz.

PEONIES
